

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER SAMPLE

North Carolina's *Rules Governing Public Water Systems* (15A NCAC 18C) require that a public water system sample for certain contaminants that may occur in the drinking water distribution system. For many contaminants, multiple water samples are necessary to determine a system's compliance with the water quality standards. Although several sample results may exceed the allowable limits, the system may be in compliance based on multiple sample results and will not be required to perform system-wide public notification or take corrective action. However, the consumers of the drinking water at an individual location where the allowable limits are exceeded are still susceptible to adverse health effects. The purpose of this notice is to inform you of the analytical results for the drinking water sample collected at the location identified below. Since the allowable limit was exceeded at this location, the potential health effects are also included so you can take any precautionary measures you feel are necessary to further protect your health.

Street Address Homes Convocation Center City Boone

<u>Sample Date</u>	<u>Parameter Tested</u>	<u>Results / Units</u>	<u>Allowable Limit / Units</u>
1/7/2025	HAA5	0.072 mg/L	0.060 mg/L

Potential Health Effects:

TTHM - Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer.

HAA5 - Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.
